## **DETAILED ACTION**

### ***Election/Restriction***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. **Claims 1-11 and 13** drawn to a wireless communication apparatus and method comprising measuring reception quality of sub-carriers within a communication band and selecting a sub-carrier satisfying a predetermined condition relating to the measure reception quality, classified in class 370, subclass 351, 329, 344.

II. **Claims 12** drawn to a base station apparatus comprising having a modulation section that modulates packet data using an M-ary modulation technique, classified in class 370, subclass 204, 205, 207, 212, 213 and 215.

2. Inventions 1 and 2 are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because a modulating section that modulates packet data using an M-ary number, as claimed in claim 12, do not need to be in the invention of group 1 in order to make the wireless apparatus of method for sub-carrier selection to function.

The subcombination has separate utility such as the M-ary modulator. An M-ary modulator comprises different communication functions in the physical layer that impacts signal quality including SNR, and can be implemented using the subcombinations of group 2.

The examiner has required restriction between combination and subcombination inventions. Where applicant elects a subcombination, and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

3. A telephone call was made to Mr. James Ledbetter on October 28, 2008 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

#### ***Conclusion***
